I. JUSTIFICATION

The chairman of COMIREX has been informed of this request and proposal, and U.S. requirements in Cambodia will be considered in the planning of operational missions.

II. OPERATIONAL CONCEPT

25X1

While only one mission in good weather is required to obtain the desired coverage, two missions may be required because of the statistical weather forecast.

III. AIR DEFENSE ANALYSIS

Cambodia has only a token air defense system. A few radars, a few antiaircraft artillery, a few MIG-15 and MIG-17 fighter aircraft, and very few trained personnel.

A Big Bar/Big Mesh radar at Phnom Penh may have tracked Giant Dragon flights near Cambodia, [REDACTED]

25X1

[REDACTED] It is possible this site might detect this U-2 aircraft flight also.

impacted near Phnom Penh. Spoon Rest A is primarily an early warning radar but is also known to serve in a target acquisition capacity for the SA-2 system. Photography or other sources have not confirmed any SA-2 or new radar in Cambodia. Therefore there is no known threat to the U-2.

IV. CLIMATOLOGY

THAILAND AND CAMBODIA BORDERS FOR MARCH AND APRIL

General: March and April are considered to be the transitional months between the northeast monsoon of winter and the southwest monsoon of summer. Relatively clear to partly cloudy weather occurs here with the winter monsoon and clouds and frequent rain with the southwest monsoon. As the northwest flow weakens in March, the cloudiness and precipitation gradually increase.

Cloudiness: In March the frequency of 3/10 or less cloud cover ranges from a maximum of 10 days in the northeast border of Thailand and Cambodia to 5 to 8 days at the northwest border southward to the coast of the Gulf of Siam. In April the favorable days for high level photographic conditions have decreased to slightly less than 5 days along the entire border of Thailand and Cambodia.
